# Overview

- Prolonged hot temperatures will peak Sunday and Monday, and continue next week
- Heat risk categories range from moderate (orange) most areas to pockets of very high risk (magenta) around Big Sur, Southern San Joaquin Valley and Southern Deserts
  - Risk for heat related illness for at risk populations and those engaging in outdoor activities
  - Heat in vehicles poses extreme dangers
- Some overnight temperature relief for Coastal and Northcentral Valley areas
- Elevated fire weather conditions across the State

# High Temperature Forecast

Friday, August 25

Saturday, August 26

# WEATHER OF CONCERN

## Weather of Concern

- A major heat wave will impact Southern California Sunday through at least next Wednesday. Excessive Heat Warnings and Advisories have been issued for the region. Monday and Tuesday look to be the hottest days.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# WEATHER SYNOPSIS BY REGION

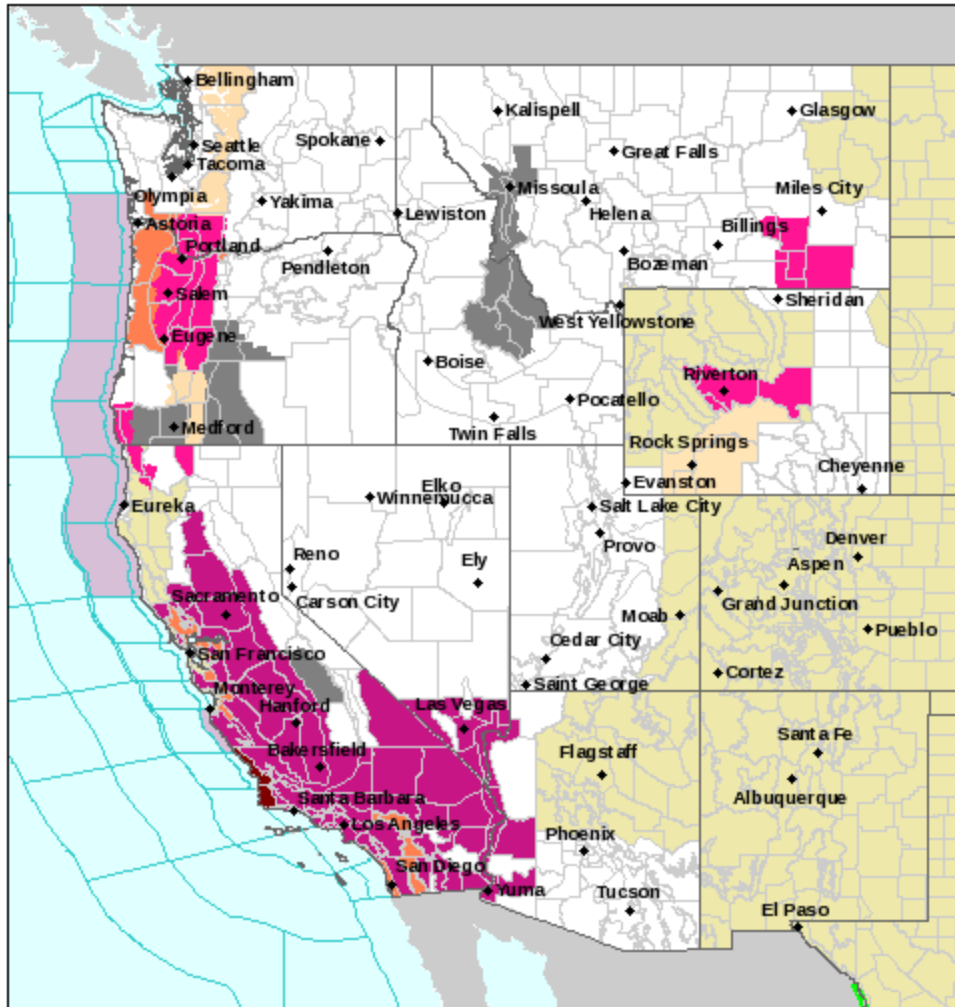

## **NORTHERN CALIFORNIA**

A building ridge of high pressure aloft will result in warming temperatures throughout the region for the next several days. Temperatures today through Tuesday are expected to reach 10 degrees above normal throughout interior areas, which means afternoon high temperatures generally between 95 and 105 degrees in most valley locations not impacted by the shallow marine layer. These afternoon temperatures will result in a moderate risk of heat-related illnesses, mostly for those groups that are particularly sensitive to heat. Overnight lows will help to provide some relief from the heat in the valleys, as clear skies and light winds will promote efficient radiative cooling and cool air drainage throughout our deep mountain valleys.

## **SOUTHERN CALIFORNIA**

Overnight coastal marine clouds are forecast into Sunday, otherwise mostly clear skies through next week. A high will build in and the temperatures will soar to well above normal next week, peaking on Monday and Tuesday with possible records. The coastal regions under the influence of marine stratus are about the same temperature as yesterday, but it is five or more degrees warmer than yesterday away from the coast. Heat advisories for the mountains begin at 10am this morning. Stratus clearing looks to be on track per the previous discussion.
